

Middle domain of IBP2 (MD-IBP2) with silver nanoparticle in 50 mM phosphate buffer of pH 6.0

Somnath Mondal, 2016

NMR Research Center | Indian Institute of Science (IISc)

Field strength: 800 MHz

Why is this your favorite spectrum?

Binding region of the IDP (MD-IBP2) immediately disappears after adding the silver nanoparticle, but the less-stable protein remains stable like this for the next few weeks.

Thanks, CIL!
