

¹H NMR in CDCl₃

Markus Ringwald, 2013

Research & Development | MCAT GmbH

Field strength: 400 MHz

Why is this your favorite spectrum?

Very nice NMR spectra of 2-(4-ferrocenyl-1H-1,2,3-triazol-1-yl)ethyl-2-deoxy-2-acetamido-3,4,6-tri-O-acetyl-β-D-glucopyranoside, published in 2014 in *Carbohydrate Research*, 387; 42–45. It shows fine and clear what it looks like, when ferrocenes and carbohydrates come together...

Very nice project done together with students from the University of Konstanz.
