

nMR is **art**

170 kDa archaeal exosome complex, $^{13}\text{CH}_3$ labeled ILV residues in a 2H background

Maxime Audin, PhD, 2011

NMR Spectroscopy Department | MPI for Developmental Biology

Field strength: 800 MHz

Why is this your favorite spectrum?

Overlay of methyl TROSY spectra recorded at different temperatures somehow resemble a map of the world, although the different continents are not to scale.
