Histone-like DNA binding protein of Helicobacter pylori

Nancy Jaiswal, 2016

NMR Department | Centre of Biomedical Research

Field strength: 800 MHz

Why is this your favorite spectrum?

This spectrum depicts a boy playing football on a wet field, which is surrounded by mountains. The cluster of peaks with high stroke level is the boy with a small ball east of him, and the peaks with less stroke level show the field with some grass and water. The boy is very happy after rain and is enjoying the climate. 1D spectra on top and left sides show the mountain.
