

Sea of puppies

Shannon Speer, 2018

Chemistry Department | University of North Carolina at Chapel Hill

Field strength: 500 MHz

Why is this your favorite spectrum?

This is a spectrum of a DNA binding protein with a 10-base pair cognate region of DNA at 500 MHz. It is my favorite spectrum because this protein is unfolded off of DNA and folds once it binds. I labeled the crosspeaks with different puppies for each backbone residue in the protein.
