Positive DNP and negative NOE enhancement of (probably) methanol.

Victoria Aladin, 2017

Physical and Theoretical Chemistry Department | Goethe University of Frankfurt

Field strength: 9.4 Tesla

Why is this your favorite spectrum?

This spectrum looks like a butterfly, which is quite cool. It took me awhile to find out that it probably comes from methanol impurity, still, it looks fancy.

Comments: I'm just a poor student with expensive isotope taste.
